

Brewery

From start-up microbreweries to large breweries, we design and create custom brewing and storage vessels that meet the requirements of any size operation. With sanitary finishes, CIP cleanability, and ASME and API designs, our brewing equipment and vessels can be customized for your brewing process. Whatever your needs, we'll work with your contractor to understand your design requirements and recommend equipment that best serves your brewer's process and your brewery's space.

Fermenters

We fabricate fermenters in any size—from a pilot size to a large field vessel—and any shape—round, square, and rectangular open top—in both atmospheric and pressure/vacuum vessels. Since we custom build each fermenter, we're able to add features, such as cooling and heating media to support your brewing process.

Lagering Tanks

Our stainless steel lagering tanks give you complete control over batch temperature to reduce by-products of fermentation and to help clarify and mellow your brew.

Bright Beer Tanks

Our single shell bright beer tanks can be installed in refrigerated rooms with an exposed heat transfer that also aids in cooling the brewery cellar. Our optional jacketed and insulated bright beer tanks can be installed in unrefrigerated areas to keep your brew at a constant temperature.

Hot/Cold Tanks

We'll customize any size tank and provide filtration that adapts to your brewing process. Our flexibility allows us to meet your specific requirements for every tank.

Mash and Lauter Tuns

We custom fabricate mash and lauter tuns that efficiently separate mash from wort. Our unique design provides a more complete extraction of the sugars from the grain.

Brew Kettles

Our brew kettles use “plug welded” heat transfer surfaces capable of using hot water and steam to slowly bring wort to a boil. Our kettles can be furnish sanitary ports for both in-process and dry hop addition, and the sanitary mechanical finish on the interior of our brew kettles enhance vessel cleanability.

Whirlpools

We custom fabricate any size whirlpool to efficiently mix and oxidize wort to meet your exact brewing specifications. Our multiple function design accommodating your brewery’s specific process flow and capacity.

Round Horizontal and Vertical Storage Tanks

Our round horizontal and vertical storage tanks transform unused space into high volume storage. Designed to deliver the best in sanitation, our tanks can be outfitted with optional dimple jacketing or laser-welded heat transfer surface to ensure uniform heating or cooling.

Additional Services

Aftermarket Service and Support

Customize and maintain your brewery equipment with additional agitators, components, and replacement parts. Our field service technicians provide prompt service for modifications and repairs on all brands of brewing equipment. We’re proud to be ASME “R” certified for modifying and repairing pressure vacuum vessels of all sizes and brands.

Site Fabrication and Field Service

We’ll bring the highest skill levels and latest technology right to your site. Our team of experienced field specialists can fabricate of any size tank up to 1,000,000 gallons and manage the entire project with our own heavy-duty construction equipment. We’ll coordinate our project with your contractors so your existing plant operations and other construction programs can continue without any delay or interruption.
